New Website Requirement

Create a website, design, code, and implement/host. Currently using GoDaddy for hosting. (www.HBAvendors.com)

Need an informational homepage, a registration page, and a database with a complete lookup. Need the lookup to be able to ask the State HBA (tables would be pre-populated/editable by us), then have a choice for Local HBA (tables would be pre-populated/editable by us), then it would show all Vendors that had been registered under the given State & Local HBA. Listings would be listed alphabetical. Would need the option to move any given Vendor to the top based on administrator desire.

When a Vendor registers, they would enter information we need, and an optional logo. They would be entered into the lookup database and two forms would then be created for them based on the information provided. These forms would be pre-created with only two sections of the form being customized based on what was entered at registration. All Vendors would create a username/password at registration to be used to edit their information.

We, as website owners, would need access to all Vendors (database-Drupal?) and option to edit any/all fields.

Design Type: New Website

Purpose of the Website: Community Website

Additional Comments: All specific details would be provided if needed to quote and accept.
